2011 Census Update: Online Completion in London

The 2011 Census, conducted on the 27th March 2011, was the first census in England and Wales to allow respondents to complete online. This update provides some provisional and early analyses of the take-up of the online questionnaire in London as compared with the rest of the country. The online questionnaire went live on 4 March 2011 and was available until 22 May 2011. The first response was received 38 minutes after the system became live. All data are sourced from the ONS 2011 Census updates and evaluation reports.

Key Findings

Over 16 per cent of census returns were completed online in England and Wales

Tower Hamlets ranked the highest for online returns in the country (29.3 per cent)

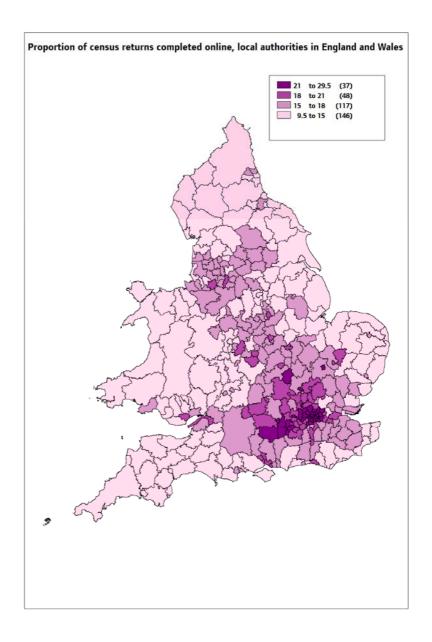

Eight London boroughs feature in the top 10 national rankings for online returns:

Tower Hamlets
City of London
Westminster
Newham
Hounslow
Kensington and Chelsea
Brent
Camden

The remaining two other local authorities are Slough and Wokingham.

Over 71 per cent of London wards had online completion rates of 20 per cent or above.

Only nine percent of the remaining wards nationally (excluding London

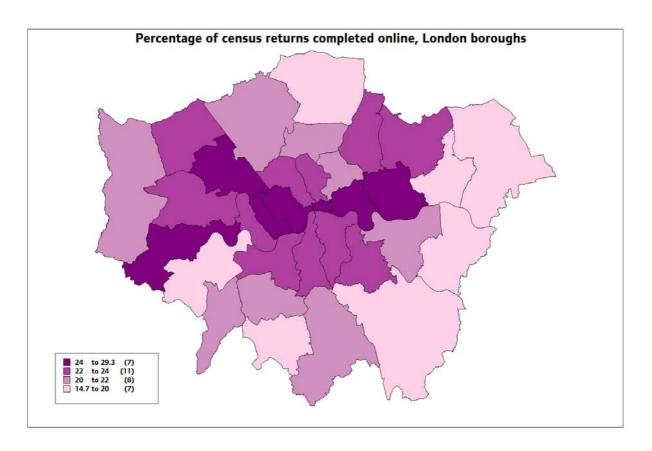

wards) had online completion rates of 20 per cent or more.

Urban areas had higher online completion than rural areas. Early analysis of the census returns by the Office for National Statistics (ONS) shows that certain groups were more likely to respond online than others, including young people. ONS analysis also shows that large households were more likely to respond online than smaller ones with over half of households with more than six people responding online compared to 15 per cent of one and two person households. Similarly ONS analysis suggests people who rent their home or have a mortgage were more likely to complete their questionnaire online than those who own their home outright. This is likely to be correlated to the age of respondents. Such characteristics are particular prevalent in London and hence will certainly have contributed to the particularly strong online completion in London boroughs. However as yet the GLA IU does not have any detailed London data to explore specific characteristics further. It is expected that this information will become available in July 2012.

Table 1 London boroughs, online completion rates

London Borough	% Internet returns	Rank within London (out of 33)	Rank within EW (out of 348)
City of London	28.1	2	2
Barking and Dagenham	19.6	28	49
Barnet	21.6	22	33

Background

ONS developed an internet data capture (IDC) service for the 2011 Census to work alongside the paper questionnaire. This service gave householders and other respondents the opportunity to complete their census online, to find information about the census, and to find help with answering specific questions.

In providing an online service, ONS aimed to both comply with government policy and fulfil public expectation that interaction between the public and government should be possible online.

The key benefits to the ONS were:

- time and resource savings in paper scanning and data capture
- improved data quality (because online capture removes scanning error which can be subject to issues such as handwriting)

To complete their census questionnaire online, householders needed an internet access code (IAC). IACs were included on the paper questionnaires which were posted to each household. Any household that didn't receive a census questionnaire could request one from the contact centre or via the online help website.

The online questionnaire had several features which were designed to create a positive user experience.

- It routed users past questions they were not required to complete, based on previous answers potentially resulting in fewer errors.
- It had capacity for more than six people in a household to complete. If completing on paper, households of more than six people needed to request a continuation form
- Any fields asking for answers already given, for example the names of people, were prepopulated

The ward level statistics have been produced via best fit OA to Ward.

For more information on the GLA IU InstantAtlas interactive mapping tool available on the London Datastore see:
