

Information Sharing Protocol

Introduction

This protocol sets out the arrangements for the sharing of sensitive information by the London Borough of Bromley (LBB) and its partners.

Who is this protocol for?

This protocol is for third party organisations that comprise the Borough Officers Group.

The objectives of the protocol

This protocol supersedes existing information sharing protocols (ISP) and ad-hoc arrangements. The objectives behind this document are:

- to provide a framework for the sharing of information that is consistent, secure and appropriate
- to ensure signatories have an approved framework to share sensitive information and help deliver service improvements to the public
- to have consistency in the handling of sensitive information
- to establish high-level principles for how, why, when and where 'sensitive' information is shared
- to assist each organisation to manage their third-parties within their own existing procedures and processes.

What are the key principles?

In agreeing to comply with the protocol member organisations will:

- nominate a senior representative to attend the board
- work together to follow best practice and improve information sharing
- align their procedures/processes to achieve consistency.

What is the role of the board?

The board's purpose is to improve the way signatory organisations share 'sensitive' information. Those attending will act as the lead contact for their organisation and agree commonality in procedures and processes.

What is 'sensitive' information?

'Sensitive' information is as defined within the Data Protection Act.

Scope

This protocol covers all forms of 'sensitive' information held by a partner (and any third-party supplier). Organisations will agree the means and process for the transfer of sensitive information in their own procedures.

Principles

The protocol is intended to ensure compliance with all current legislation including the Data Protection Act, the Human Rights Act, Freedom of Information Act (where applicable) and Caldicott principles. The principles partners will follow are to:

- not keep information longer than necessary
- use data only for its intended purpose
- agree fair and lawful processing
- share information on a need to know basis
- ensure as far as possible that information held is current and accurate
- handle it securely.

If an organisation is not a signatory to this protocol, it may still follow and comply with its principles. Some cases will override data protection and confidentiality and each organisation should judge a case on its merits.

Approach

<u>Consult</u>	<u>Agree</u>	<u>Deliver</u>
<ul style="list-style-type: none">- partners- business areas- appropriate boards- legal- London Councils- PCT/NHS- police- voluntary sector- business areas- informal interviews	<ul style="list-style-type: none">- council executive- partners- all partners outline protocol to their third-party suppliers	<ul style="list-style-type: none">- partner leads- all staff- all managers

Benefits

- to reduce the risk by staff/managers of inappropriate sharing
- to provide a better understanding of citizens, their needs and the services they require
- to provide a more complete picture of an individual's circumstances, foster joint working and avoid duplication
- to give the public confidence that information entrusted to organisations and that is held about them is kept securely and used appropriately.

Retention

Partners will have existing policies and procedures for the sensitive documents they hold. To share effectively and appropriately it is important that wherever possible there is a consistent, joint approach.

Data quality

Information is held in different formats, whether hard copy or media. It is important to agree standards in the way we share the format of some 'sensitive' information. The partners' joint governance board should agree a consistent approach for this purpose.

Partner responsibility

Each partner will ensure:

- staff are aware of how they should deliver the secure transfer of sensitive information
- a representative on information sharing is known within their organisation
- information requests are treated in accordance with agreed policy
- That staff are adequately trained and familiar with the law, policies and procedures governing the release of information their organisation holds.

Workflow

All staff need to know how to handle confidential and sensitive information. A workflow linked to this protocol is attached as Appendix G.

DPA/Fol requests

These requests will be handled according to each partner's current procedures and processes. However, if the request requires information from a third-party supplier, the appropriate partner will be responsible for feeding back to the requestor

Security of transfer

Each organisation will ensure there is commonality in the safe handling and protective marking of 'sensitive' information based on sensitivity, urgency and risk, and will aim to align appropriate procedures and practices. GCSX and Egress Switch are the respected standards for sharing information securely across organisations

Complaints

A complaint from an individual (or board representative) regarding a partner's handling of 'sensitive' information will initially be investigated within the receiving organisation using existing procedures. Complaints that may need the protocol to be reviewed will require board approval.

Membership

The board will agree and review the organisations that are signatories to it.

Information Sharing Protocol Board

March 2012

Annex A - Legal rights of an individual

- Common Law Duty of Confidentiality
- Caldicott principles
- Data Protection Act 1998
- Equality Act 2010
- Human Rights Act 1998
- Access to Health Records Act 1990
- Freedom of Information Act 2000
- Crime and Disorder Act 1998
- Criminal procedures and Investigations Act 1996
- Regulation of Investigatory Powers Act 2000
- Health and Social Care Act 2001
- Children Act 2004 and the information sharing index

Annex B - Agreement - Information Sharing Protocol

Agreement for

This protocol provides the principles for sharing sensitive information related to individuals.

Signatories undertake to:

- agree a representative attends a joint governance board
- agree to align commonality in procedures and processes
- agree to raise staff awareness by issuing guidance to managers/staff.

Signatories

This protocol is signed on behalf of the above partner.

Annex F - Glossary

Borough Officers Group	A grouping of individual partners who are the senior representatives for their organisations
Caldicott Guardian	This is a senior individual responsible for protecting the confidentiality of patient/service user information and an individual who enables appropriate information sharing. The Guardian plays a key role to ensure that the NHS, councils with social services responsibilities and partners satisfy the highest standards for handling patient identifiable information
Data Protection Act	It is the 1998 act for processing data on identifiable living people and governs the <u>protection of personal data</u>
Freedom of Information	This act (2005) gives the public the legal right to be provided with information held by a public authority (subject to exemptions)
Local strategic partnership	This was a grouping of public, private, business, community and voluntary sectors to collectively support each other and work together for the public good. The group has evolved into the "Borough Officer Group" with the Information Sharing Protocol Board feeding into the Group (see above)
Retention and disposal	Various schemes exist, for example councils usually use the Local Government Classification and Retention Scheme while the NHS use procedures outlined by the Department of Health
Information governance	This is a framework for handling 'sensitive' information to ethical and quality standards set by the health sector
Information management	This is the means by which organisations aim to maximise efficiency through planning, collecting, organising, using, controlling, storing and disposing of their information
Information assurance	This is the practice of managing risks related to the use, processing, storage, transmission and systems of information
Information sharing	This is about providing the key principles of trust between diverse organisations with the aim to improve delivery
ISO/IEC 27002	A code of practice to improve information security. It was created by the <u>International Organisation for Standardisation</u> and <u>International Electrotechnical Commission</u>
Security classification	This ensures only those who need to know have access to particular documents.
